# Avaya Accessibility Conformance Report

VPAT® Version 2.1 – October 2020

**Name of Product/Version:** Avaya Aura® Communication Manager 8.1.3

## Product Description:

The statements in this document apply to all versions of Avaya Aura Communication Manager 8.1.3 software.

The responses to this report refer to the Avaya Aura Communication Manager 8.1.3 administrative interfaces. In many cases, these interfaces will be located in spaces frequented only by service personnel for infrequent maintenance, repair, or occasional monitoring of equipment, and therefore may qualify for exemption under E202.5 ICT Functions Located in Maintenance or Monitoring Spaces

### ***Exception.***

Avaya Aura Communication Manager (CM) 8.1.3 software is administered using the following three tools or methods:

1. A text-only interface, also called a text user interface (TUI), and referred to in Avaya documentation as the System Access Terminal (SAT). The SAT interface pre-dates the Section 508 rules by several years and is a non-web based interface that uses simple text positioning and fields to manage information and configuration. Although over one hundred fifty different configuration screens are accessible via the SAT tool, it is Avaya's experience that the vast majority of operations performed by administrators are in a category commonly referred to as "MAC" tasks: Moves, Adds, and Changes. This report documents the SAT interface conformance using MAC operations.
2. A native CM browser-based graphical interface which is named System Management Interface (SMI). Generally, the SMI browser interface is only used by Avaya personnel and business partners to support initial installation, upgrades, and security features. Examples of some of the SMI screens are:
  - a) Download Files
  - b) Trusted Certs
  - c) Server Access.
  - d) Server/Application Certs.
  - e) Certificate Signing Request

These are infrequent operations that are typically performed by expert individuals. Therefore the SMI browser interface is not included in this conformance statement.

3. System Manager which is used to manage many of the Avaya Aura™ solution components, including Communication Manager. System Manager 8.1.3 conformance is documented in a separate VPAT.

The SAT configuration screens may be grouped into two categories:

1. Common Weekly Administration (may be handled by a less skilled administrator using common MAC operations)
  - a) Station form
  - b) Agent form (Contact Center)
  - c) VDN (Contact Center)
2. More Complex Administration (handled by high skilled administrator at installation and updated annually or less often)
  - a. Dial Plan form
  - b. Trunk form
  - c. Media Gateway configuration
  - d. Announcements/Paging
  - e. System Parameters

Unless otherwise noted, these statements of conformance are limited to MAC operations performed via the SAT tool. Avaya does not certify that the conformance statements are valid for all of the screens that may be presented by the SAT tool. Service personnel and system administrators who require the support of assistive technologies may be unable to perform the initial physical installation, system setup and upgrades, and some of the less frequent or more complex administrative tasks.

## Terms

The terms used in the Conformance Level information are defined as follows:

- **Supports:** The functionality of the product has at least one method that meets the criterion without known defects or meets with equivalent facilitation.
- **Supports with Exceptions:** Some functionality of the product does not meet the criterion.
- **Does Not Support:** The majority of product functionality does not meet the criterion.
- **Not Applicable:** The criterion is not relevant to the product.
- **Not Evaluated:** The product has not been evaluated against the criterion. This can be used only in WCAG 2.0 Level AAA.

## WCAG 2.0 Report

Tables 1 and 2 also document conformance with:

- Revised Section 508: Chapter 5 – 501.1 Scope, 504.2 Content Creation or Editing, and Chapter 6 – 602.3 Electronic Support Documentation.

Note: When reporting on conformance with the WCAG 2.0 Success Criteria, they are scoped for full pages, complete processes, and accessibility-supported ways of using technology as documented in the [WCAG 2.0 Conformance Requirements](#).
